Daisy Smith (American College of Physicians)

Conclusion of Steering Committee

Published by the Brazilian Society of Anaesthetists (SBA) and the Professional Wellbeing Committee from World Federation of Societies of Anesthesiology PWC/WFSA following report aims to stimulate the development of effective action on the part of world entities involved with anesthesiology, in favor of the occupational health of anesthesiologists and safety of their patients. For anesthesiologists themselves it aims to promote awareness, conscious that awareness of any problem is the first step towards its solution.

The main objective of this book is to address the pathological disorders of occupational wellbeing in anesthesiologists (diagnosis, prevalence, prevention and treatment), based on epidemiological evidence, which affect in a complex manner and sometimes seriously the physical and mental health, personal beliefs and social relations of the anesthesiologist, as well as the care of patients under their responsibility.
